PROFILE

Full-stack developer with 3+ years of experience building web and mobile applications. I started with React and React Native and expanded into full-stack development with Next.js, TypeScript, Node.js and database technologies. I work end to end, from interface design to backend, on e-commerce, corporate web and classifieds projects, with a focus on secure development, clean code, performance and maintainable architecture.

WORK EXPERIENCE

FREELANCE FULL-STACK WEB & MOBILE DEVELOPER

May 2025 – Present

- **For Medical:** Built a corporate website end to end, covering frontend and backend, with dynamic content management and responsive interfaces.
- **Enfes Gurme:** Developed an e-commerce platform including product, category, cart, order and payment systems plus an admin panel.
- **Classifieds Platform:** Developed web and mobile applications with user, listing and category management.
- Designed scalable, maintainable application architectures with React, Next.js, React Native, Node.js and modern databases.
- Implemented authentication, authorization, input validation and API security following OWASP principles.
- Handled REST API integrations, database management and performance optimization.

FRONTEND DEVELOPER & UI DESIGNER

Orbis Guard Cyber Security | April 2024 – April 2025

- Developed the company's web interfaces with React, Next.js and Astro, designing them directly in code without a separate design tool.
- Built fast, SEO-friendly and optimized web pages with Astro.
- Followed web security standards on the frontend, implementing authentication, authorization and secure API communication requirements.
- Created responsive, accessible and maintainable interfaces with reusable UI components.
- Contributed to improvements in usability, design consistency and performance.

REACT / REACT NATIVE DEVELOPER

Yurotek | Istanbul (Remote) | February 2023 – March 2024

- Developed user-focused web and mobile applications with React and React Native.
- Set up state management with Redux Toolkit and Context API and built maintainable component structures.
- Built dynamic features such as product management, listings and shopping cart through REST API integrations.
- Improved user experience with reusable components and responsive design.
- Optimized app performance, fixed bugs and contributed actively to the team's development process.
